***Claim Rejections - 35 USC § 102***

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by any of US Pats. 4025294, 3787170, or 3947243.

Each of the cited patents discloses a parison (perform) conveyor which rotates parisons while conveying them along two pairs of opposed parallel paths, on opposite sides of a radiant heater, and each pair joined by a loop not exposed to the heater and hence "outside the [heating] zone."

***Claim Rejections - 35 USC § 103***

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over any of US'294, US'170, or US'243, in view of US Pat. 5980229.

The claims differ from US'294, US'170, or US'243 only in calling for reflector means opposite the radiant heating means, and IR lamps. However, US'229 discloses reflector means 60 opposite the radiant heating means 40 in a parison heating device with parallel paths heated by a central IR heater. Moreover, IR lamps have long been well known heating means in diverse industrial and domestic ovens, and in the instant type in particular. It would have been obvious to utilize reflector means opposite the radiant heating means to improve heating efficiency, and to use IR lamps for their improved response time and ease of replacement.
